

**Currently Pending Claim Set**

21. (New) A method of delivering rAAV to the brain of a subject suffering from a CNS disorder, comprising:

- (a) providing a pharmaceutical composition comprising rAAV, said rAAV encoding a therapeutic protein; and
- (b) administering said composition to the brain of the subject such that widespread distribution of said rAAV is achieved and the therapeutic protein is expressed at levels that provide a therapeutic effect in said subject.

22. The method of claim 21, wherein said rAAV is administered using convection enhanced delivery.

23. The method of claim 22, wherein said convection enhanced delivery is performed using an infusion pump.

24. The method of claim 22, wherein said convection enhanced delivery is performed using an osmotic pump.

25. The method of claim 21, wherein said rAAV is administered to the striatum.
